Essential Statements to develop, compile, execute and display some message("Hello World!") on console

1) class
2) main method
3) System.out.println()

- class is essential because, Java is an OOP language so every program must starts with a class.

- main method is essential because, main method is the initial point of class logic execution. JVM executes a class starts with main method. If a class does not have main method, JVM will not execute it, will throw error.

- S.o.pl() is essential in Java we can display any message on console only by S.o.pl(-);

Program #1: Develop a program to print HKProgrammingWorld on console

```
class FirstProgram {
	public static void main(String[] args) {
		System.out.println("HKPrograming World");
	}
}
```
